Exercise: Built-in Functions

Built-in functions

argument list

↓

```
print("Hello World!")
```

↑

function name

Built-in functions

```python
print("Hello World!")                    # output: Hello World!
```

```python
print("Math Functions")

abs_int = abs(-1)
print(abs_int)

int_to_float = float(100)
print(int_to_float)

print(int(1.23))
print(max(1, 2, -5, 10, 0))
print(min(1, 2, -5, 10, 0))
print(pow(2, 3))
print(round(51.6))
```

```
